

以上为使用 matlab 进行数据读取的例子

clear;

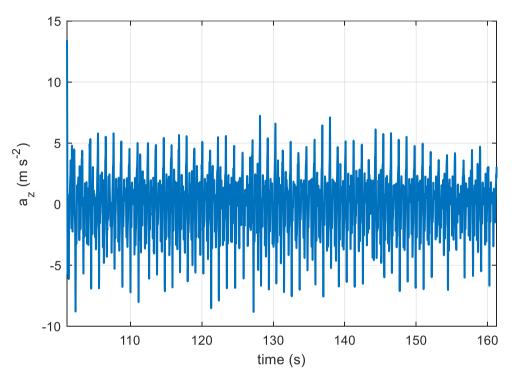

```
a=csvread('C:\Users\weifangda\Desktop\Accelerometer.csv',1);
plot(a(:,2),a(:,3),a(:,2),a(:,4),a(:,2),a(:,5));
legend('z','y','x');
xlabel('t/s');
ylabel('acc');
title('acc-t-csvread');
z=fft(a(:,3));
y=fft(a(:,4));
x=fft(a(:,5));
a=importdata('C:\Users\weifangda\Desktop\Accelerometer.csv');
plot(a.data(:,2),a.data(:,3),a.data(:,2),a.data(:,4),a.data(:,2),a.data
(:,5));
legend('z','y','x');
xlabel('t/s');
ylabel('acc');
title('acc-t-importdata');
u=timeseries(a.data);
TT=timetable(a.data(:,3),a.data(:,4),a.data(:,5),'TimeStep',seconds(0.0
1), 'StartTime', seconds(a.data(1,2)));
```
